Job Description – AI Engineer Intern

Job Title: AI Engineer Intern
Location: Bandra BKC
Employment Type: Internship
Duration: 4 Months
Stipend: 10K Per Month

About the Role

We are looking for a passionate and motivated **AI Engineer Intern** to join our team and work on real-world AI applications using modern **Generative AI technologies**.

This is a **hands-on engineering internship**, not a research-focused role. You will work closely with experienced engineers on **LLMs, AI Agents, MCP Servers, RAG pipelines, AI assistants, and AI-powered products**.

If you enjoy coding in Python, experimenting with new AI technologies, and building practical software solutions, we would love to hear from you.

Key Responsibilities

- Build AI-powered applications using **Python**.
- Develop **AI Agents and AI automation workflows**.
- Build and integrate **MCP (Model Context Protocol) servers and clients**.
- Work with **Large Language Models (LLMs)** and Generative AI APIs.
- Develop **Retrieval-Augmented Generation (RAG)** applications.
- Build AI assistants, copilots, and workflow automation tools.
- Integrate AI capabilities into web applications and backend services.
- Work with modern AI frameworks and libraries.
- Collaborate with senior engineers to develop and deliver production-ready AI features.

Required Skills

Programming

- Strong proficiency in **Python**.
- Good understanding of **Object-Oriented Programming (OOP)**.
- Basic knowledge of **REST APIs and JSON**.
- Good debugging and problem-solving skills.

AI & Generative AI

- Good understanding of **LLMs and Generative AI**.
- Understanding of **Prompt Engineering**.
- Familiarity with **AI Agents / Agentic AI** concepts.
- Basic understanding of **RAG, embeddings, and vector search**.

Model Context Protocol (MCP)

- Basic understanding of **MCP**.
- Ability to build or integrate simple MCP servers or clients.
- Understanding of **tool calling and AI workflows**.

AI Frameworks

Exposure to one or more:

- LangChain
- LangGraph
- LlamaIndex
- CrewAI
- AutoGen
- Semantic Kernel

Backend Development

- **FastAPI** knowledge is preferred.
- Basic API development experience.
- Fundamental knowledge of SQL.

Development Tools

- Git & GitHub
- Basic Docker knowledge
- Familiarity with AI coding assistants such as ChatGPT, Claude, Cursor, GitHub Copilot, or Windsurf.

What We're Looking For

- Strong interest in **AI and software engineering**.
- Excellent Python programming skills.
- Curiosity and willingness to learn emerging AI technologies.
- Ability to quickly understand new frameworks and tools.
- Strong logical thinking and problem-solving skills.
- Self-driven approach with willingness to take ownership.
- Comfortable working in a startup environment and small engineering team.
- Good communication and collaboration skills.
